### **Vertical Push-in connection for confined spaces**

(04/19) The PTV terminal block series with side conductor connection is a new Phoenix Contact innovation. This ensures clearer wiring without bending radii in confined spaces.

The conductor and connection marking is more recognizable.

This Phoenix Contact series features feed-through, three-conductor, and four-conductor terminal blocks. Testing and bridging options are available on each terminal block. Furthermore, disconnect and knife disconnect terminal blocks are also available. All terminal blocks are available up to a cross section of 4 mm<sup>2</sup>. Thanks to the tool-free Push-in direct connection technology, the PTV terminal blocks enable time-saving conductor connection. The connection principle and conductor routing are self-explanatory. Logistics costs can be reduced through the use of the standard accessories of the CLIPLINE complete terminal block system.
